

The Challenge:

Dynamic Industries Inc. needed a turnkey inventory management system to streamline the management of their full-service fabrication, construction and maintenance services which they provide to a broad range of worldwide markets.

The Quatred Solution:

- A cloud hosted solution (hardware & software)
- Wireless MESH networks in two ship yards on the Gulf of Mexico spanning a total of 160 acres (indoor & outdoor)
- A secure Wide Area Network required to accommodate both ship yards
 - ✓ A Texas based Data Center for all internal networks
 - ✓ A cloud based IBM solution hosted in Marlborough, MA
- Mobile computers, mobile printers and mobile tablets utilized to track all inventory and fabrication
- Integration of World Class ERP software to their existing financial software
- Training (IT and users) on all systems and infrastructure

"When evaluating ERP Material Management Systems, our final selection was based on the functionality required by several of our fabrication facilities and the total cost of the solution. We chose Quatred's QUICK® mobile solution in conjunction with PRISM® ERP. Quatred deployed our Enterprise system from inception through completion. Quatred set up a cloud based system, installed and configured the ERP software, integrated the ERP software to our existing financial software, deployed wireless MESH networks for our outdoor fabrication yards, rolled out handhelds, tablets and mobile printers, trained our staff and customized the system to meet our requirements. Quatred has been and still is very responsive to all of our needs!"
