

QUICK[®] for PRISM[®]

quatred
"Touchless Technologies"

Quatred was engaged by Sunnyside farms to carefully examine processes and workflows to identify areas where online real-time communications could:

- ✓ Improve productivity
- ✓ Increase responsiveness
- ✓ Improve customer service
- ✓ Improve business continuity
- ✓ Eliminate excessive manual labor
- ✓ Improve inventory accuracy
- ✓ Increase inventory visibility
- ✓ Facilitate lot traceability

QUICK[®] software was implemented and an enterprise wireless network was installed throughout the entire manufacturing facility. Mobile computers, palm computers, vehicle mounted computers, fixed IP stations with barcode scanners and wireless barcode label printers were deployed. The result is streamlined business processes with employees performing their tasks where they occur online in real-time!

Sunnyside FARMS[®]

"Using the QUICK[®] approach, we were able to extend PRISM[®] functionality to handhelds and fork trucks throughout the entire operation. Engaging Quatred for a complete solution... hardware, software, bar coding & implementation services... was definitely the right choice! I am extremely impressed!"

Becky Keller - Project Manager
