

The Challenge:

- Do you want to be able to cross reference your items with your vendor's part numbers, serial numbers, item reference numbers or RFID tags?
- Would you like to scan your vendor's barcode, a serial number barcode, an item reference or an RFID tag when performing mobile transactions and have the system automatically convert it to your item number?
- If so, you should consider deploying the QUICK[®] Item/Vendor Xref add-on!

QUICK[®] Item XRef:

- Online real-time access to NaviLine[®] Inventory.
- Scan NaviLine[®] item barcode and all vendor related items identified in the Item Description file are displayed for maintenance.
- You can add a new vendor item by simply scanning the NaviLine[®] item barcode, selecting the vendor from a dropdown list and scanning the vendor's item barcode.
- The interface will automatically retrieve the NaviLine[®] item for the Vendor Item, Item Reference, Serial Number or RFID tag you read/scan.
- The Cross Reference functionality is available in issues, returns, physical inventory and item inquiry.
